

SAAS-002 Blueprint

The \$20/Month Stack That Replaced a \$3,000 Marketing Agency

Generated for SaaS Autopilot on 2026-06-07.

Purpose

Three tools, \$20 a month, and about four hours of setup. This is what replaced my marketing agency.

Workflow Stack

- make.com
- linkedin
- claude

Build Outline

Scene	Purpose	Viewer takeaway
1	The Hook (0:00-0:30)	Three tools, twenty dollars a month, and about four hours of setup. In this video, I'm going to show you the exact automation stack that completely replaced my three-thousand-dollar-a-month marketing agency. We're going to bypass the hype, show you the live running workflows, and calculate the exact cost per run. Let's build it step by step.
2	The Problem (0:30-1:30)	Standard B2B marketing agencies charge massive retainers for tasks that are incredibly repetitive. Every month, they bill you to write blog posts, draft cold outreach emails, manage social media calendars, and research potential leads. This manual agency structure is slow, expensive, and takes days to execute a single campaign. But with modern LLMs and agentic workflows, almost eighty percent of these tasks can be fully automated at a fraction of the cost, running continuously without human intervention.
3	The Stack (1:30-2:30)	To build this agency replacement stack, we only need three tools: first, Make.com for visual workflow orchestration; second, Claude Sonnet via API for high-quality copywriting; and third, a simple Google Sheet for lead tracking and storage. The subscription costs are straightforward: Make.com is nine dollars, Google Workspace is six dollars, and Claude API usage is pay-as-you-go, averaging about five dollars a month for thousands of runs. Total cost: twenty dollars a month.
4	The Build (2:30-6:00)	Let's walk through the setup. The system is split into two automated loops. Loop one handles lead research and copywriting. The workflow triggers when a new lead is added to our Google Sheet. Make.com intercepts the contact, calls a custom scraper to extract their website content, and feeds the raw text into Claude. Claude analyzes the company's value proposition, identifies their pain points, and drafts a highly personalized, custom outreach email. Loop two handles content syndication. It takes our core topic, drafts a blog post, structures a companion LinkedIn update, and schedules both automatically. By designing modular prompts, the output feels entirely organic and tailored, avoiding generic AI-generated templates.
5	The Results (6:00-7:00)	The results are clear and measurable. What used to cost three thousand dollars a month in agency fees now costs less than twenty dollars. The workflow processes over five hundred targeted leads a week, drafts hyper-personalized campaigns, and keeps our social channels consistently active. The time save is immense, allowing small teams to run enterprise-grade marketing operations with zero overhead.

Implementation Notes

- Start with a test account and fake sample data.
- Replace all placeholders before connecting live accounts.
- Keep human review before sending outbound messages or changing production systems.
- Record a successful dry run before publishing the workflow to viewers.

Prompt-Improved Build Prompt

Prompt-Improved Automation Build Template

Optimized locally with the SaaS Autopilot prompt improver rules: clear role, context, variables, workflow, constraints, QA, and output format.

ROLE & PERSONA

You are a senior B2B automation architect, prompt engineer, and implementation QA lead.

CONTEXT & OBJECTIVE

Build a practical automation blueprint for: The \$20/Month Stack That Replaced a \$3,000 Marketing Agency

The workflow should help {{target_customer}} reduce {{manual_task}} and produce {{business_outcome}} using this likely stack: make.com, linkedin, claude.

REQUIRED INPUT VARIABLES

- {{target_customer}}
- {{workflow_goal}}
- {{manual_task}}
- {{business_outcome}}
- {{tool_stack}}
- {{data_source}}
- {{approval_owner}}
- {{risk_level}}

STEP-BY-STEP WORKFLOW

1. Summarize the business problem in plain language.
2. Map each input source, transformation step, human review point, and final output.
3. Recommend the exact automation modules or API steps needed for {{tool_stack}}.
4. Create sample test data that avoids real customer information.
5. Define error handling for missing data, failed API calls, duplicate records, and bad outputs.
6. Add a human approval checkpoint before any outbound message, billing change, or production update.
7. Provide a go-live plan with monitoring for the first three live runs.

CONSTRAINTS & SAFETY RULES

- Do not invent credentials, private customer data, or unverifiable claims.
- Keep outbound communication respectful, short, and compliant with platform rules.
- Prefer test accounts and fake data until QA passes.
- Include rollback steps for every production action.

OUTPUT FORMAT

Return the answer with these sections:

1. Workflow Summary
2. Tools and Accounts Needed
3. Step-by-Step Build Plan
4. Prompt or Message Templates
5. Test Data
6. QA Checklist
7. Go-Live Checklist
8. Risks and Mitigations
