

SAAS-006 Blueprint

How to Build a Telegram AI CRM Agent That Closes Clients

Generated for SaaS Autopilot on 2026-06-07.

Purpose

Millions of businesses run on messaging platforms, but sales reps cannot reply instantly. I built a Telegram AI agent connected to Claude and Google Sheets that automatically qualifies leads, handles B2B objections, and books meetings while you sleep.

Workflow Stack

- n8n
- telegram
- google sheets
- claude
- crm

Build Outline

Scene	Purpose	Viewer takeaway
1	The Hook (0:00â"0:30)	Millions of businesses run on messaging platforms, but sales reps cannot reply instantly. I built a Telegram AI agent connected to Claude and Google Sheets that automatically qualifies leads, handles B2B objections, and books meetings while you sleep.
2	The Problem (0:30â"1:30)	In modern sales, response speed is everything. If a prospect messages your business and waits an hour for a reply, they have already gone to a competitor. But hiring a 24/7 support team to monitor messaging chats is highly expensive.
3	The Stack (1:30â"2:30)	We build this messaging agent using Node.js, the Telegram Bot API, the Anthropic Sonnet SDK, and Google Sheets to store conversation logs and qualified leads. The total monthly API running cost is under three dollars.
4	The Build (2:30â"6:00)	The logic is simple. When a prospect messages the bot, n8n routes the message to Claude. Claude evaluates their business size, checks if they qualify as a lead, writes a personalized B2B response, and updates the Google Sheet status.
5	The Results (6:00â"7:00)	The results are impressive. Our Telegram agent responds to incoming queries in under three seconds, answers product objections perfectly, and books qualified leads directly into our calendar without requiring any manual sales labor.
6	The CTA (7:00â"end)	You can grab the full Telegram agent source code and sheet templates in the playbook below.download the boilerplate, and start automating your client acquisition today. This channel needs your support. Please subscribe, leave a word of appreciation for the author, and may God bless you.

Implementation Notes

- Start with a test account and fake sample data.
- Replace all placeholders before connecting live accounts.
- Keep human review before sending outbound messages or changing production systems.

- Record a successful dry run before publishing the workflow to viewers.

Prompt-Improved Build Prompt

Prompt-Improved Automation Build Template

Optimized locally with the SaaS Autopilot prompt improver rules: clear role, context, variables, workflow, constraints, QA, and output format.

ROLE & PERSONA

You are a senior B2B automation architect, prompt engineer, and implementation QA lead.

CONTEXT & OBJECTIVE

Build a practical automation blueprint for: How to Build a Telegram AI CRM Agent That Closes Clients

The workflow should help {{target_customer}} reduce {{manual_task}} and produce {{business_outcome}} using this likely stack: n8n, telegram, google sheets, claude, crm.

REQUIRED INPUT VARIABLES

- {{target_customer}}
- {{workflow_goal}}
- {{manual_task}}
- {{business_outcome}}
- {{tool_stack}}
- {{data_source}}
- {{approval_owner}}
- {{risk_level}}

STEP-BY-STEP WORKFLOW

1. Summarize the business problem in plain language.
2. Map each input source, transformation step, human review point, and final output.
3. Recommend the exact automation modules or API steps needed for {{tool_stack}}.
4. Create sample test data that avoids real customer information.
5. Define error handling for missing data, failed API calls, duplicate records, and bad outputs.
6. Add a human approval checkpoint before any outbound message, billing change, or production update.
7. Provide a go-live plan with monitoring for the first three live runs.

CONSTRAINTS & SAFETY RULES

- Do not invent credentials, private customer data, or unverifiable claims.

- Keep outbound communication respectful, short, and compliant with platform rules.
- Prefer test accounts and fake data until QA passes.
- Include rollback steps for every production action.

OUTPUT FORMAT

Return the answer with these sections:

1. Workflow Summary
2. Tools and Accounts Needed
3. Step-by-Step Build Plan
4. Prompt or Message Templates
5. Test Data
6. QA Checklist
7. Go-Live Checklist
8. Risks and Mitigations
