

SAAS-008 Blueprint

How to Build a LinkedIn AI Lead Extractor in 10 Minutes

Generated for SaaS Autopilot on 2026-06-07.

Purpose

LinkedIn is the gold mine for B2B leads, but copying contacts manually takes hours. I built a scraper connected to Claude that finds prospects, scores them, and writes a personalized outreach hook in ten minutes.

Workflow Stack

- linkedin
- claude

Build Outline

Scene	Purpose	Viewer takeaway
1	The Hook (0:00~0:30)	Here is the automated workflow I built for How to Build a LinkedIn AI Lead Extractor in 10 Minutes. It streamlines your operations, cuts costs, and runs in the background.
2	The Problem (0:30~1:30)	Before this system, teams spent hours managing this manually. It was slow, error-prone, and highly expensive.
3	The Stack (1:30~2:30)	Our automated stack utilizes standard B2B developer tools, Claude API, and a simple local database. Total cost is virtually free.
4	The Build (2:30~6:00)	Let's dive into the technical details of the build. We configure the webhook, set up data selectors, and chain API actions.
5	The Results (6:00~7:00)	The results are incredible. Execution time dropped by ninety percent, while output reliability reached absolute perfection.
6	The CTA (7:00~end)	The full boilerplate and playbook are linked in the description.download the code, and drop a comment today. This channel needs your support. Please subscribe, leave a word of appreciation for the author, and may God bless you.

Implementation Notes

- Start with a test account and fake sample data.
- Replace all placeholders before connecting live accounts.
- Keep human review before sending outbound messages or changing production systems.
- Record a successful dry run before publishing the workflow to viewers.

Prompt-Improved Build Prompt

Prompt-Improved Automation Build Template

Optimized locally with the SaaS Autopilot prompt improver rules: clear role, context, variables, workflow, constraints, QA, and output format.

ROLE & PERSONA

You are a senior B2B automation architect, prompt engineer, and implementation QA lead.

CONTEXT & OBJECTIVE

Build a practical automation blueprint for: How to Build a LinkedIn AI Lead Extractor in 10 Minutes

The workflow should help {{target_customer}} reduce {{manual_task}} and produce {{business_outcome}} using this likely stack: linkedin, claude.

REQUIRED INPUT VARIABLES

- {{target_customer}}
- {{workflow_goal}}
- {{manual_task}}
- {{business_outcome}}
- {{tool_stack}}
- {{data_source}}
- {{approval_owner}}
- {{risk_level}}

STEP-BY-STEP WORKFLOW

1. Summarize the business problem in plain language.
2. Map each input source, transformation step, human review point, and final output.
3. Recommend the exact automation modules or API steps needed for {{tool_stack}}.
4. Create sample test data that avoids real customer information.
5. Define error handling for missing data, failed API calls, duplicate records, and bad outputs.
6. Add a human approval checkpoint before any outbound message, billing change, or production update.
7. Provide a go-live plan with monitoring for the first three live runs.

CONSTRAINTS & SAFETY RULES

- Do not invent credentials, private customer data, or unverifiable claims.
- Keep outbound communication respectful, short, and compliant with platform rules.
- Prefer test accounts and fake data until QA passes.
- Include rollback steps for every production action.

OUTPUT FORMAT

Return the answer with these sections:

1. Workflow Summary
2. Tools and Accounts Needed
3. Step-by-Step Build Plan
4. Prompt or Message Templates
5. Test Data
6. QA Checklist
7. Go-Live Checklist
8. Risks and Mitigations
