

SAAS-011 Setup and QA Checklist

Build a Custom AI Customer Support Bot Connected to Company Docs

Pre-Build Checklist

- Create a test workspace.
- Use fake sample data first.
- Create required tool accounts.
- Prepare a rollback plan.
- Document all placeholders and credentials needed.

QA Checklist

- Trigger runs with a test payload.
- Every action produces the expected output.
- No API keys or private data are visible.
- Error handling is tested.
- Final output matches the video promise.
- Viewer can reproduce the setup from the PDF.
- Any live outbound action has human approval.

Go-Live Checklist

- Run three successful test cases.
- Confirm permissions and sharing settings.
- Turn on scheduling only after QA passes.
- Monitor the first live run.
- Archive the final workflow version.
